

Content Management Systems

Cutting Edge Content Management. We are happy to provide you with one of the most powerful Open Source Content Management Systems (CMS) on the planet, Joomla! Joomla! is used all over the world from simple websites to complex corporate applications. It's easy to install, simple to manage and reliable. Joomla! is a fully featured web content management system.

Websites powered by Joomla allow the website owner to maintain the website's contents without the need for specialized (or expensive) programming skills. Basically, if you can use a browser (like Internet Explorer or Firefox) and have the skills to operate a program like Microsoft Word, you can maintain a website built on Joomla.

The software itself is free from the licensing expense that goes with most other highly functional, easy to use content management systems. As a businessperson you should appreciate how this all adds up: No licensing fees, plus the ability to control and maintain the content of the website yourself. Put another way, the ability to build and maintain a highly functional, flexible, modular website is now within the grasp of anyone. You pay us for the added value of our expertise in customizing the systems to your needs and for designing the interfaces and look and feel to match your corporate identity, not with software offerings that start at US\$ 17,000 (plus plus PLUS)!

While it may seem too good to be true; that highly functional CMSs are now available without licensing costs --it is true. This website is built on Joomla, as are a number of others in our portfolio.

It is supported by an active and well organized open source development team and community, of which Strickler & Prieto has contributed several aspects of programming code. Joomla! is both easy to use at the entry level for creating basic websites, whilst having the power and flexibility to support complex web applications

Joomla! implements the core requirements of a full-featured CMS. It has a powerful and extensible templating system with the ability to upload and manage many different data types. User access control, content approval, rich administrative control, and content display scheduling are all built-in. New features and extensions are constantly added to the core system, with many more being available and supported by the community.

Features:

- Content Management Functionality such as Web content and document authoring for your business users. Allow business users and non-technical personnel to add, author, and update Web content. Translate content on-the-fly with the best in business multilingual support. Put messaging in the hands of the people who know it best. Apply workflows, approvals, and permissions. Editing content is as easy as editing a Word document.

- Integrated Web Site Analytics Track the life-cycle of your Web site visitors. View real-time statistics to see how many people have come to your site, where they came from, and what pages they viewed.

Blogging Take your blog to the next level with comment moderation, blog viewer authentication, and structured blogging.

-

Forums, Threaded Discussions, & Message Boards Encourage interaction among your online community with forums. Allow anonymous posts or use Joomla's built-in membership security model for authentication. Forums are use a Word-like WYSIWYG editor that allows you to spruce up your comments in document form

-

Subscriptions & Web Alerts Allow Web site visitors to self-register and self-administrate preferences. When content is added or updated on your site, user can use the RSS feed on your site to deliver the latest additions.

-

Many More Features! Newsletters, Audio and Video,

Sure, you can pay a lot more money to get a branded solution, but at the end of the day you find that you are simply paying a lot more -- not getting a lot more.

You pay us for the added value of our expertise in customizing the systems to your needs and for designing the interfaces and look and feel to match your corporate identity.

In our view, this is the way it should be: Why should you pay for a bit of generic code? Rather, you should pay us for the ability to make that code work for your company in the manner you desire with the appearance you desire, and for our assistance setting up the environment, testing the solution, and getting the entire thing ready for market, without eating up your time.

And of course, we're there when you need us to do an upgrade, add a new feature, or otherwise help you make the most of your web project.

While there are no restrictions or special requirements, we build Joomla! to run on Apache with PHP and MySQL.

DEMO

About the demo:

Explore the demo of the power and simplicity of Joomla! Feel free to roam around the website and make changes as you wish. Please note that the demo site is typically running the very latest release version of Joomla! and the demo might not the same as the current stable release.

Frontend:

First, visit our live demonstration site to get a feel for how Joomla! works. This is simple template populated with some sample content.

(Tip: click administration link to edit the site)

- Frontend Website

Backend:

Now, log on to the administration section to make some changes. You will have full control over a live Joomla! website. The content on the site is recycled each hour so have fun! (Tip: Make some changes and come back to the frontend website to see your work!)

- Backend Administration
